

I wish to make a submission to the review of Australia's Future Taxation System (the Review) and bring to your attention an issue that is of great concern to me. In recent weeks the Chairman of the Review, Ken Henry has been floating the idea of abolishing the imputation credit system on dividends paid by Australian shares. As an investor and self funded retiree I have developed a strategy where my annual income depends to a significant extent on the dividends from Australian shares and associated imputation credits.

Franked dividends from Australian shares are paid from the after-tax portion of company profits and shareholders then receive imputation tax (franking) credits for the company tax already paid. The imputation credit represents the tax already paid on behalf of the shareholder and can be used to pay tax on income from other sources, or since 2000, excess credits are fully refunded. This means that superannuation funds paying a pension and low income earners have these tax credits fully refunded by the ATO.

This often means the difference between generating enough annual income to meet living expenses and having insufficient income. If the income is inadequate, some capital needs to be liquidated to meet the mandatory pension withdrawal amounts (and to pay living expenses) leaving less capital for the following year and this accelerates to the point where all capital is exhausted and the retiree is no longer self-funded but becomes reliant on the taxpayer for income support. This would increase age pension payments in the future.

The suggestion that company tax would be dropped to 20% in exchange for abolishing imputation credits is of no benefit because it still means a cut in income to individuals. Likewise, making the dividends tax-exempt does not alter the position. We also question whether it would make any difference to the alleged problems with foreign investment. A simpler solution would be to allow companies to pay unfranked dividends to foreign shareholders and use the existing foreign withholding tax system, which would allow such shareholders a credit for foreign tax paid in their own country.

Imputation credits simply represent tax withheld by Australian companies on behalf of their Australian shareholders in the same way that employers withhold tax for PAYG wage earners. As such, imputation credits are important to ALL Australian taxpayers who own shares in Australian companies either directly or indirectly. It also prevents double taxation of dividend income. This is important as investors would prefer other forms of investment eg property if dividends were double taxed, potentially causing another property bubble and making houses even more unaffordable.

I exhort you to carefully examine ALL the potential affects of abolishing imputation credits system and ensure the Government does not embark on this retrograde step.

Yours sincerely,

DOUG. PATERSON
