

Hi AFTS Secretarist

Re :Enviromental challenges

Due to global climate awareness and the misappropriate use of non-renewable resources. I would like the effective life of solar powered generating system assets and solar panels be reduced from 20 years to 10 years for depreciation purposes.

As larger companies are not willing to change there current energy systems when such a large initual outlay take so long to recoup via the current depreciate rates.

Reduces CO2, creates employment, gives export opportunities, reduces costs relating to infrustructure nationally and creates revenue and taxes from 1 additional L-T profits of companies with lower power costs 2 the profits from companies installing the solar panels.
